

Decibel®

Andrew's Next Generation of
Dual Band Antennas are Now
Designed with Teletilt® Compatibility

Next generation dual band antennas to give you maximum flexibility

Decibel® dual band antennas

Over 15 years ago Andrew Corporation introduced the concept of multibeam arrays. First created for paging and trunking applications, the multibeam array has evolved into multibeam antennas. Decibel dual band antennas combine two distinct antennas at different bands sharing the same aesthetically, environmentally pleasing radome to allow for ease of zoning considerations and tower loading.

Andrew is committed to our customers to design the best arrays that will solve application challenges faced in today's environment. Some of the key variables that affect system performance are:

- Horizontal beamwidth
- Vertical beamwidth
- Gain
- Elevation pointing angle or downtilt angle
- Front-to-back ratio
- Pattern shaping

Andrew considers every variable when designing and engineering each dual band antenna. The principle features offered in each of our dual band antennas consist of:

- Higher gain and adjustable electrical downtilt on at least one of the bands offers the lowest risk in network duplication while achieving the desired overlay.
- Single element dual band performance for microcell antennas having similar horizontal and vertical beamwidths.
- Side-by-side or interleaved (high band radiating elements within low band radiating elements) element designs for higher gain applications to allow flexibility for tilting independently.

Andrew now offers the next generation of dual band antennas in both 65° and 90° bands, all designed with field adjustable electrical downtilt and Teletilt® compatibility. In addition, these antennas are wide band 1710-2180 MHz, allowing maximum flexibility for future frequency planning.

DBXLH-6565A-VTM

DBXLH-6565A-VTM

DBXLH-6565A-R2M

– designed with Teletilt® compatibility for future frequency planning

The following model numbers represent the next generation of dual band antennas:

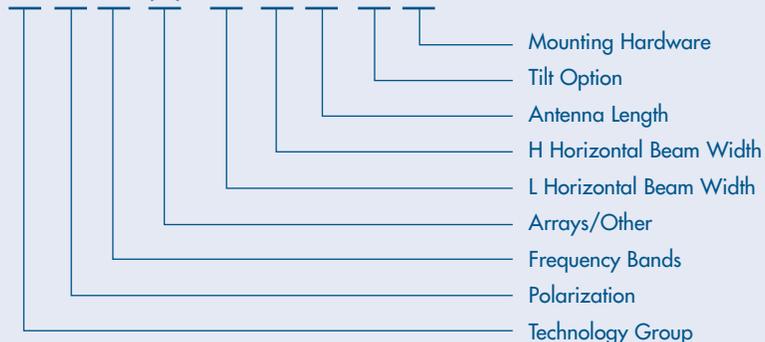

* Dual Band Antenna Model Number	Dual Band Antenna with Factory Installed ATM200 Actuator
DBXLH-6565A-VTM	DBXLH-6565A-R2M
DBXLH-6565B-VTM	DBXLH-6565B-R2M
DBXLH-6565C-VTM	DBXLH-6565C-R2M
DBXLH-9090A-VTM	DBXLH-9090A-R2M
DBXLH-9090B-VTM	DBXLH-9090B-R2M
DBXLH-9090C-VTM	DBXLH-9090C-R2M

*See model specifications on the following pages.

Andrew's Decibel® dual band model numbers are designed to tell a very specific story, revealing specific attributes of the antenna contained within the model number. The dual band model number guide will allow for easy interpretation of the model number schematic.

New Model Number Guide – Dual Band

DB X LH (A) - 90 90 A - VT M

TECHNOLOGY GROUP

DB = Dual band
TB = Tri band

POLARIZATION

X = Xpol (±45°)
V = Vpol (vertical)

FREQUENCY BANDS

L = 824–960 (824–896, 870–960)
H = 1710–2180 (1710–1880, 1850–990, 1920–2180)

ARRAYS/OTHER

A = Stacked
B = Side-By-Side
C = With built-in diplexer

ANTENNA LENGTH

A = 1.3 m (51.2 in)
B = 2.0 m (78.7 in)
C = 2.6 m (102.4 in)

TILT

T# = Degree of fixed tilt
VT = Variable electrical tilt
R1 = ATC100 Teletilt® remote control system
R2 = ATC200 Teletilt® remote control system

MOUNTING HARDWARE

M = Standard downtilt mount

Andrew Teletilt® remote control variable electrical downtilt antenna system

The Andrew Teletilt Remote Control System allows network optimization that improves coverage, lowers costs, increases revenue, and increases customer satisfaction with better call quality. Service providers can make antenna adjustments remotely in just minutes—without site downtime or costly tower crews.

Andrew now introduces the ATC200 Teletilt Remote Control Variable Electrical Downtilt Antenna System. The ATC200 system includes:

- Actuators (field retrofitable or factory installed to the antenna)
- Local control unit
- Portable control unit
- Control cables
- Jumpers
- Junction boxes
- Lightning protection unit
- Splitters
- Additional products

ATC200 Teletilt® Antenna System

of dual band antennas compatible

While network planning is becoming more costly and challenging, the ATC200 Teletilt® System offers a low cost solution. The ATC200 system:

- Handles up to 32 actuators
- Has only one cable running up the tower or Smart Bias-T
- Uses junction boxes to break out the control cable to individual actuators or daisy chain

ATC200-1000 Local Controller

- Uses internal web server
- Network configurable through IP addressing and Ethernet interface
- Can be used with an Ethernet wire-line or wireless connection
- Works with ANMS™ (Antenna Network Management System)

ATC200-Lite

- Portable
- Local control only
- Plugs directly into laptop

In addition, the ATC200 Teletilt Antenna System controls the ATM200 actuators from either a 19-inch 1U ATC200-1000 Local Control Unit or a handheld portable ATC200-Lite Control Unit.

Diversity polarized dual band antennas - microcell applications

Andrew has engineered diversity polarized antennas in both 65° and 85° beamwidths specifically for microcell applications. For ease of zoning restrictions the antennas are also designed in a small 12" x 12" x 4" package with complete symmetry so connector locations can be downward or upward.

Features

- Diversity polarization, $\pm 45^\circ$
- Small compact package with integrated wall mounts
- Symmetrical pattern shape allows invert or on-side mounting
- 806–869 MHz and 1850–1990 MHz

Benefits

- Ideal for dense, urban micro sites
- Excellent wide coverage
- Significant cost reduction in deployment and operations
- Reduce the number of cable runs from four to two
- Easier zoning approval

Model Numbers	Gain (dBi)	HBW	VBW	Tilt	H x W, mm (in)
	Low Band / High Band				
721DD65ESXM	9.1/9.1	65°/60°	60°/65°	0°/0°	317 x 317 (12.5 x 12.5)
721DD85ESXM	7.1/7.1	85°/85°	85°/85°	0°/0°	304.8 x 304.8 (12.5 x 12.5)

Vertically polarized dual band antennas

Andrew has engineered vertically polarized antennas in 60°, 65°, and 90° beamwidths. For ease of zoning restrictions not only do these antennas meet the dual band specifications, with arrays of 806–896 MHz for the low band frequency and 1850–1990 MHz for the high band frequency, they are also designed in a slender package.

Features

- Dual band Cellular/PCS
- Vertically polarized, both bands
- Field adjustable electrical downtilt on cellular band (V – model numbers)
- PCS array features superior USLS and NullFill

Benefits

- Minimizes risks when overlaying PCS band by allowing operators to match existing cellular coverage
- Allows simple integration of TMA systems to improve coverage
- Significant cost reduction in deployment and operations

778X105M85V1

Extremely low insertion loss and high power handling capability.

641280

Indoor/Outdoor diplexer for dual-band combining of 806–960 MHz and 1710–2170 MHz

The Andrew Crossband Coupler combines signals from wireless systems operating in the 806–960 MHz bands with signals from systems operating in the 1710–2170 MHz bands onto a common feeder cable.

These couplers use unique suspended stripline printed circuit board technology to provide extremely low insertion loss and high power handling capability in a compact, rugged, weatherproof housing. Sealing gaskets provide protection from moisture ingress at all interfaces.

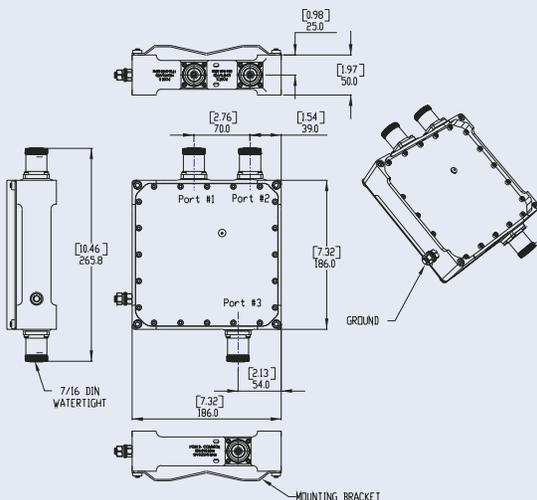

The Andrew Crossband Coupler 641280 product family features extremely low insertion loss (0.10 dB @ 806–960 MHz and 0.15 dB @ 1710–2170 MHz). A minimum 47 dB isolation is provided between output ports.

These couplers feature precision 7-16 DIN female connectors and an external grounding stud for lightning protection purposes. A mounting bracket and two band clamps are provided for quick deployment and installation. These units are stackable and do not require additional spacer hardware.

The Andrew Crossband Coupler product family is also available in different dc block and dc bypass versions. This feature allows full compatibility with systems requiring tower mount amplifiers. The internal dc block versions utilize a distributed element dc block design, which provides lower insertion loss and better reliability than dc block designs that contain ceramic dc blocking capacitors.

Features

- Novel stripline printed circuit board
- Extremely low insertion loss
- Moisture protection
- Stackable
- Mounting bracket and external grounding stud provided
- Integrated dc block/bypass versions available

Specifications for Andrew Crossband Coupler Model 641280 Product Family

ENVIRONMENTAL

Operating Temperature	-40° C to +65° C
Moisture Resistance	IP68 (housing includes weatherproof watertight gaskets)
Vibration	IEC 68-2-6 (10-2000 Hz sinusoidal amplitude 3 planes)
Mechanical Shock	IEC 68-2-27, 50 g
Salt Fog	IEC 68-2-11, (336 hrs)
Solar Radiation	IEC 68-2-5
Thermal Shock	IEC 68-2-14
Humidity	IEC 68-2-30
Weight kg (lbs)	1.95 (4.3) with bracket 2.54 (5.6)

ELECTRICAL

Insertion Loss,	(port #2–port #3)	0.15 dB maximum, 0.10 dB typical (806–960 MHz)
	(port #1–port #3)	0.20 dB maximum, 0.15 dB typical (1710–2160 MHz)
	(port #1–port #3)	0.30 dB maximum, 0.15 dB typical (2160–2170 MHz)
Return Loss,	(port #2–port #3)	20 dB minimum, 23 dB typical (806–960 MHz)
	(port #1–port #3)	20 dB minimum, 23 dB typical (1710–2160 MHz)
	(port #1–port #3)	16 dB minimum, 19 dB typical (2160–2170 MHz)
Isolation,	(port #1–port #3)	47 dB minimum, 50 dB typical (806–960 MHz)
	(port #2–port #3)	47 dB minimum, 50 dB typical (1710–2170 MHz)
Maximum Power	Simultaneous operation of 500W CW (806–960) & 275 W CW (1710–2170)	
Peak Power (PEP) Rating	12 kW (806–960 MHz), 6 kW (1710–2170 MHz)	
dc Breakdown	4000 volts (center conductor to ground)	
Lightning Protection	15 kA 8x20 center conductor, 50 kA 8x20 outer conductor	
Passive IMD, (2 x 43 dBm carriers)	-153 dBc typical

Customer Care Teams

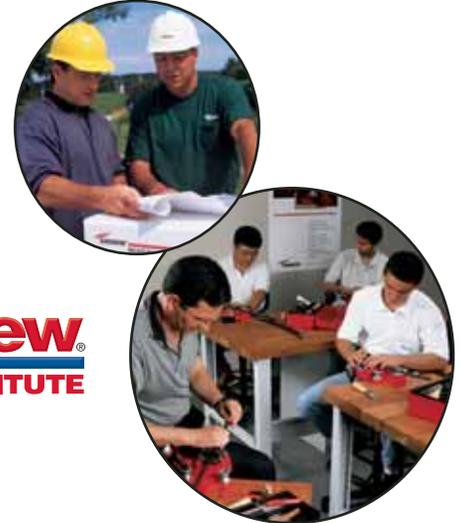

Andrew provides dedicated Customer Care Teams that offer personalized, responsive service from trained individuals familiar with the industry's people, products, processes, and problems.

Andrew Institute

The Andrew Institute provides detailed, hands-on workshops customized to meet any level of technical training required.

www.andrew.com

The next generation of information for the wireless communication industry is at www.andrew.com. The site offers comprehensive technical and product information, unique Industry Solution Overviews, extensive self-service support, and an advanced search capability. Users can download the industry's best planning software, register for Andrew Institute courses, access real time Orders/Shipping Status, read Andrew Access Customer Solutions, and much more.

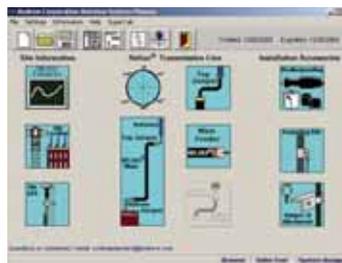

Andrew: 60 Years of Quality the World Depends On

Founded in 1937, Andrew Corporation designs, manufactures, and delivers innovative and essential communications equipment and solutions for the global telecommunications infrastructure market. Products portfolios provide complete solutions for applications that connect the world, including broadband CATV, wireless telephone, in-building applications, geolocation, unlicensed band, mobile subscriber communications, satellite communications, terrestrial microwave, WiFi, broadband, and many others.

AASP — the first and only PCS/Cellular Systems Design Software

Design your PCS or cellular system in less time, with greater accuracy, and lower costs with advanced Andrew Antenna Systems Planner software (AASP). Powerful AASP software graphically guides you through the entire design process, from the choice of frequency to the available shipping options. The program's dynamic, rule-based logic generates custom solutions by using standard Andrew products while automatically checking component compatibility. Upon completion, AASP provides you with a customized bill of materials of the Andrew parts necessary for the system.

AASP is available on the Andrew Powertools™ CD-Rom or as a download from www.andrew.com
